# Scenarios

Scenarios

- If we have a simulation: prepare agent for real world training in the best way

- If we don't have a simulation: Train the agent in the fastest best way

- If we trained an agent…

  ➡ Works on one day but not on others…

- Agent should be able to adapt quickly

How to make RL work on real world problems?

Simulation-based RL

Model-based RL

Adapt to real world

Policy to reach target
